HELPING HAND
FOR RELIEF AND DEVELOPMENT

Acknowledging that our business impacts the environment...

...We set most ambitious targets to act:
70% reduction by 2030
net-zero by 2040

...To support our customers & our communities in decarbonizing their supply chains

APM TERMINALS

Our efforts have 3 pillars

Reduce

Fuel and electricity consumption of equipment and facilities at our terminals

Replace

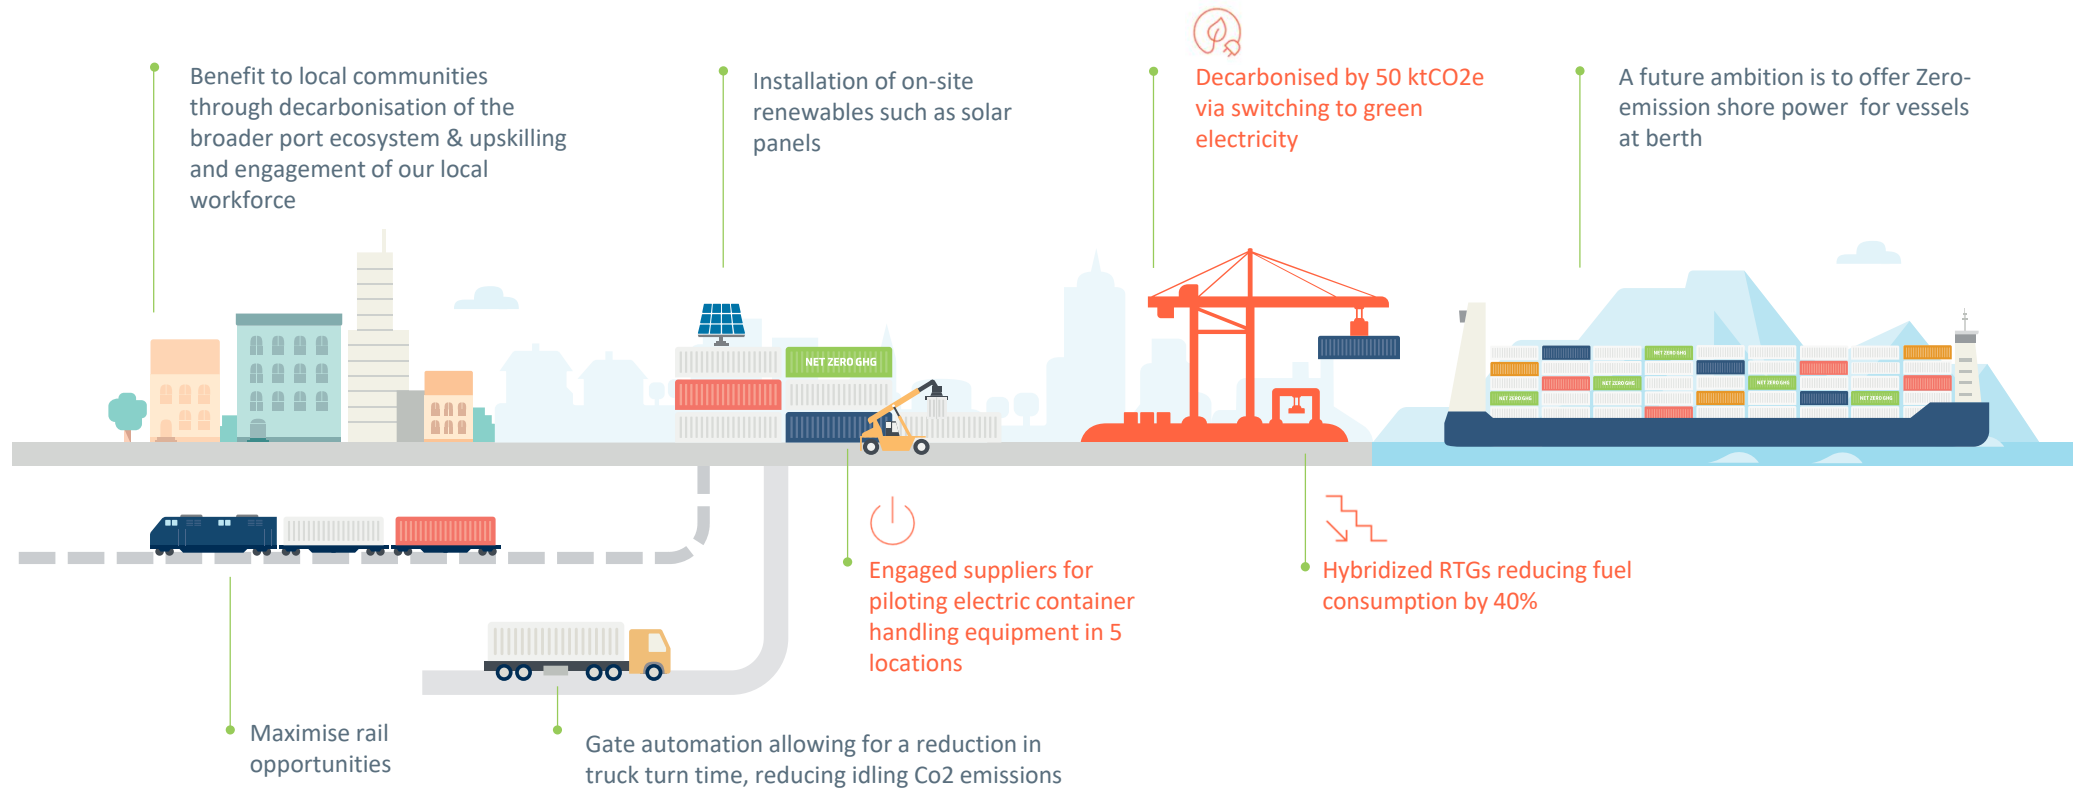

Equipment run on fossil fuel with electrified alternatives

Decarbonise (energy supply)

By switching to green electricity, on-site renewables such as rooftop solar panels and using green fuels

In practice the value creation for our customers and communities is **multi-faceted and terminal specific**

We will achieve our target whilst developing competitive and reliable solutions with **high business and low environmental impact**, which anticipate our customers' challenges of today and **meet their needs of tomorrow**.

ACT case study: A clear plan for how to lead the green transition in Jordan

Background & Context

- **ACT is a Public-Private-Partnership** between the Jordanian Govt, represented by ADC, and APM Terminals (APMT)
- ADC and APMT shares a vision of a greener future for the Port of Aqaba and in early 2022 started the work on a roadmap towards **ACT becoming net zero**
- The **Decarb roadmap was launched in June 2022** in a joint conference between ACT and ADC
- It was clear to both ADC and APMT that in order to carry out the significant investments needed in decarbonization, a **longer time frame for the partnership was needed**
- As a result, the parties signed an **MoU for a 15-year extension** in Sep 2022 allowing investments in decarbonization to follow
